SUMMARY

Results-oriented Fullstack Developer with hands-on experience building scalable, full-stack web applications using React, Node.js, Next.js, and MySQL. Completed a government-facing web development attachment in Kenya, delivering production-ready solutions for regulatory compliance. Skilled in end-to-end development from user interface design to database architecture. Passionate about solving real-world problems through clean, performant code.

EXPERIENCE

Attachee — Fullstack Developer

Makueni Tech and Innovation Hub

February 2026 – April 2026, Makueni, Kenya

- Built and maintained multiple government-facing websites using React and Node.js, ensuring cross-browser compatibility and accessibility compliance.
- Developed a sand mining sites tracker application using React, MySQL, and Docker to streamline regulatory compliance and environmental monitoring for county officials.
- Containerised full-stack applications with Docker and Docker Compose, establishing consistent deployment pipelines across development and staging environments.
- Collaborated within cross-functional Agile teams using Scrum methodologies to deliver project milestones on schedule and exceed stakeholder expectations.

PROJECTS

Gaming Website Landing Page

- Crafted a visually immersive gaming landing page featuring custom parallax scrolling effects and smooth scroll-triggered animations.
- Engineered a dynamic navigation bar with scroll-aware state transitions and mobile-responsive hamburger menu functionality.
- Implemented performant CSS animations and JavaScript event listeners to maintain 60 frames per second rendering across modern browsers.
- Ensured full responsive design compliance, delivering pixel-perfect layouts on mobile, tablet, and desktop viewports.

Kenyan Property Rentals Platform

- Designed and developed a property listing platform connecting Kenyan landlords and tenants with advanced search and filter capabilities by location, price range, and property type.
- Implemented secure user authentication and role-based access control, delivering separate dashboards for property owners and rental seekers.
- Built a fully responsive user interface optimised for mobile and desktop devices, ensuring seamless user experiences across varying screen sizes and network conditions.
- Optimised database queries and indexing strategies in MySQL to handle high-volume property searches with sub-second response times.

MoneyMate — Personal Finance Manager

- Architected a full-stack personal finance application tailored for the Kenyan market, supporting Kenyan Shilling (KES) currency formatting and localised transaction categories.
- Implemented income and expense tracking modules with dynamic spending visualisations using interactive charts and dashboards.
- Integrated artificial intelligence-powered receipt scanning functionality to auto-extract transaction details and reduce manual data entry for users.
- Engineered a scheduled email reporting system using Node.js cron jobs, delivering automated weekly and monthly financial summaries to registered users.

EDUCATION

Certificate in Web Design

East Techcomputer College • June 2024

- Mastered front-end fundamentals including HTML5, CSS3, and JavaScript for modern web development.
- Gained practical experience in graphics design principles and Microsoft Office productivity tools.

Diploma in Computer Science

Cooperative University of Kenya • October 2024

- Specialised in fullstack web development with advanced coursework in computer networking and system design.
- Completed capstone projects involving end-to-end application development, database normalisation, and RESTful API architecture.

SKILLS

JavaScript (ES6+), TypeScript, Python, SQL
React.js, Next.js, TanStack Query, HTML5, CSS3, Responsive Web Design
User Experience (UX) Design, User Interface (UI) Design, Figma
Git, GitHub, Docker, Docker Compose, Agile Methodologies
Node.js, Express.js, REST API Development
MySQL, PostgreSQL, MongoDB
